

ROI with Door Tablet

Return on Investment Explained

Time is money. Workspaces cost money. Don't waste precious time managing workspaces

Workspaces are expensive. You have to buy or rent them. Heat and cool them. Furnish and repair them. Clean them, equip them etc. And they cost all that money regardless of whether you use them efficiently or not. By using Door Tablet to optimize workspace management, you get the most value out of every workspace.

The Cost of Manual Room Booking

If each employee spends 60 minutes a week manually booking rooms then the annual cost to a company with 250 employees on \$40k a year working for 48 weeks would be \$83,000. One 2010 study suggested business professionals spend 4.75 hours a week arranging meetings, meaning an annual cost of over \$360,000 to that company.

Some companies delegate the task to their office managers instead, but time is still wasted as employees must liaise with them. An office manager being paid \$40k per year who spends only 90 minutes each day managing workspace bookings, costs a company \$630 per month - plus they could be using their time to do something productive instead.

Manual Systems Just Don't Work Well

Rooms get double booked. The wrong rooms get booked. The right equipment isn't in the room. People turn up at the wrong time or at the wrong room. The room isn't booked for long enough. And no one can find an empty room when they need one. If five employees paid \$240 an hour must waste 15 minutes waiting outside an occupied meeting room, then the cost to the company for that one delayed meeting is \$300.

The overt financial costs of manual systems are:

- Each employee's time spent sorting out workspaces themselves
- Paying someone to sort out workspaces when they could do something else
- Lost productivity
- Wasteful meetings (double booked, starting late etc.)

The hidden financial costs are:

- Reputational damage
- Lost deals and opportunities

Door Tablet Adds Value

Door Tablet not only saves money on workspace booking, it adds value with comprehensive workspace analytics. This is powered by Universal Analytics and our amazing workspace signage and Wayfinding services.

Beyond analytics and a deeper understanding of workspace usage, the Door Tablet system looks good on your walls, and solves issues related to misused or underutilized resources.

Efficient Workspace Management

Door Tablet will get the right people into the right workspace at the right time at the lowest cost in terms of time and money.

Door Tablet optimises the use of meeting rooms, hot desks, huddle spaces and booths. Not only that, Wayfinding and overview displays guide people along the way. Door Tablet enhances the way you work with no new technology to learn - so there's no need to spend money and time on staff training.

Security

We built our system with security in mind, not as a mere afterthought. Door Tablet runs on your premises or in your private cloud, so you have complete security control of the system. We do not have access to customers' data at all.

A booking system that can be hacked is a potential commercial disaster for any company - don't risk it.

Different users can be allocated different booking privileges via room PIN passcodes. Door Tablet can restrict room entry for room security depending on authentication and authorization. Rooms can be unlocked by PIN passcode or RFID. We offer "hardened" versions of our devices so no one can gain physical access to them via ports or interfaces.

Stability

There is no point in having a secure, comprehensive workspace management system if it is full of glitches or keeps failing. Every system failure will cost you money, damage your reputation and reduce morale.

You cannot afford to buy any system that is unreliable; Door Tablet software is rock-solid stable.

Our help desk is available to you but you will rarely need it. We are proud that Door Tablet always works like it should with 99.99% uptime.

Simplicity

Door Tablet software integrates seamlessly with your scheduling system: Microsoft Office 365, Microsoft Exchange, Google G Suite, HCL Domino and others. Employees can quickly book a workspace with the click of a button using the scheduling software with which they are already familiar. All our interactive display layouts and functionality are intuitive to use.

You do not need to change the way you work.

Scalability

Because Door Tablet is device and software agnostic, you are not tied to any technology.

As your company grows and expands, so will Door Tablet.

Easily change your scheduling software or display devices. Add or remove hardware devices as needed. If you relocate, simply take the whole Door Tablet system with you. If you have your own display panels in place, there is no need to change them.

System Analytics Powered by Google

Door Tablet interfaces with Google Universal Analytics. No need to waste time and money creating your own analytic system or rely on generic efforts.

Use the power of Google Analytics, combined with Door Tablet, to better understand how your workspaces are being used.

This gives you the power to make the workspace management changes needed to increase workspace and meeting efficiency, saving you time and money.

More reasons to Invest in Door Tablet

- Use your existing display devices: no need to buy new equipment if you are happy with the hardware you already have
- Our own purpose-built display devices work "out of the box": Door Tablet offers a curated range of well valued, purpose-built display devices
- Door Tablet offers full customization to fit your brand and enhance your corporate messaging
- Low energy costs: Door Tablet enables reduction of power consumption in all our devices.
- Evaluate - try before you buy: we offer a no-cost, risk-free, no obligation, trial of our software and hardware
